

CLAIMS

1. An immunostimulating agent which comprises a complex of an immunostimulating oligonucleotide and a polysaccharide having β -1,3-bonds.
2. The immunostimulating agent of claim 1, wherein the immunostimulating oligonucleotide contains an unmethylated CpG motif.
3. The immunostimulating agent of claim 1, wherein the phosphoric acid backbone of the oligonucleotide is phosphorothioate-modified or phosphorodithioate-modified
4. The immunostimulating agent of claim 1, wherein the polysaccharide having β -1,3-bonds is β -1,3-glucan or β -1,3-xylan.
5. The immunostimulating agent of claim 1, wherein the β -1,3-glucan is selected from among schizophyllan, curdlan, lentinan, pachyman, grifolan, laminaran and scleroglucan.
6. The immunostimulating agent of claim 1, wherein the polysaccharide is modified with nucleic acid-binding functional group and/or cell membrane-affinitive functional group.
7. The immunostimulating agent of claim 1, wherein the complex of the oligonucleotide and the polysaccharide is of a triple helix structure formed through hydrogen bonds and hydrophobic interactions.
